RUNNING COOL

OPTIBELT BELTS FOR TRANSPORT REFRIGERATION

Always stay cool! Mobile cooling units provide chilly conditions in trucks and commercial vehicles. Naturally ensuring that milk and cheese, as well as medicines or medical samples, are always fresh when they reach their destination.

Transporting chilled goods is a hot business. Tight, just-in-time logistics, uninterrupted cold chain for perishable goods in transit and strict environmental regulations leave little room for failure or technical problems.

Which is why cooling units in modern trucks usually have multiple drive belts.
Our recommendation: the **optibelt TRUCK POWER CP** series.

“The Optibelt
alternative in
OE quality.”

Michael, 33, mechatronics master

RANGE OF PRODUCTS IN OE QUALITY

See the CP number on the back of the belt for the Optibelt aftermarket product range. Optibelt is a trusted supplier within the OE business. Market leaders in this segment are already benefiting from the Optibelt quality.
